SUBUNIT: Homodimer; disulfide-linked. Also found as heterodimer with PIGF (By similarity).
                                                                                                                                                                                                                     Biol. Chem. 271:3877-3883 (1996).

FUNCTION: Growth factor active in angiogenesis, vasculogenesis and endothelial cell growth. It induces endothelial cell proliferation, promotes cell migration, inhibits apoptosis, and induces permeabilization of blood vessels. It binds to the VEGFR1/Flt-1 and VEGFR2/Kdr receptors and to heparan sulfate and

Biol. Chem. 270:7717-7723(1995).

-!- FUNCTION: Growth factor active in angiogenesis, vasculogenesis and endothelial cell growth. It induces endothelial cell proliferation, promotes cell migration, inhibits apoptosis, and induces permeabilization of blood vessels. It binds to the VEGFR1/Fit-1 and VEGFR2/Kdr receptors and to heparan sulfate and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Conn G., Bayne M.L., Soderman D.D., Kwok P.W., Sullivan I

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 although a signicant proportion remains cell-associated, most is freely secreted. VEGF-A188 is very basic; it is cell-associated after secretion and is bound avidly by heparin and the extracellular matrix, although it may be released as a soluble form by heparin, heparinase or plasmin (By similarity).                                                                                                                                                                                                                                                                            (Mesocricetus auratus).",

Cell Tissue Res. 296:339-349(1999).

1- FUNCTION: Growth factor active in angiogenesis, vasculogenes endothelial cell growth. It induces endothelial cell proliferation, promotes cell migration, inhibits apoptosis, induces permeabilization of blood vessels. It binds to the VEGFR1/Fit-1 and VEGFR2/Kdr receptors and to heparan sulfate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    TISSUE-Decidua, and Embryo;

                                    FUNCTION: Growth factor active in angiogenesis, vasculogenesis and endothelial cell growth. It induces endothelial cell proliferation, promotes cell migration, inhibits apoptosis, and induces permeabilization of blood vessels. It binds to the VEGFRI/Fit-1 and VEGFRZ/Kdr receptors and to heparan sulfate and
              heparin (By similarity).
SUBUNIT: Homodimer; disulfide-linked.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  187

It induces endothelial cell proliferation, promotes cell migration, inhibits apoptosis, and induces permeabilization of blood vessels. It binds to the VEGFR1/Flt-1 and VEGFR2/Kdr receptors and to heparan sulfate and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           binding.";
                                                                                                                                                                                                           Local
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        FUNCTION: Growth factor active in angiogenesis, vasculogenesis and endothelial cell growth. It induces endothelial cell proliferation, promotes cell migration, inhibite apoptosis, and induces permeabilization of blood vessels. It binds to the VEGFR1/Flt-1 and VEGFR2/Kdr receptors and to heparan sulfate and heparin. Neuropilin-1 binds isoforms VEGF-165 and VEGF-145. SUBUNIT: Homodimer; disulfide-linked. Also found as heterodimer with PIGF (By similarity).
                                                                                                                                                                                                                                                                                                                                                                   SUBCELLULAR LOCATION: VEGF121 is acidic and freely secreted. VEGF165 is more basic, has heparin-binding properties and, although a signicant proportion remains cell-associated, most freely secreted. VEGF189 is very basic; it is cell-associated after secretion and is bound avidly by heparin and the extracellular matrix, although it may be released as a soluble form by heparin, heparinase or plasmin.
                                                                                                                                                                                                                                                                Name=VEGF189;

Biochem. Biophys. Res. Commun. 161:851-858(1989).
-i-FUNCTION: Growth factor active in anglogenesis, vasculogenesis and endothelial cell growth. It induces endothelial cell proliferation, promotes cell migration, inhibits apoptosis, and induces permeabilization of blood vessels. It binds to the VEGFRI/Fit-1 and VEGFR2/Kdr receptors and to heparan sulfate and heparin (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SEQUENCE OF 27-190 FROM N.A.

FUNCTION: Growth factor active in angiogenesis, and cell growth. Induces endothelial proliferation and v permeability (By similarity).
SUBUNIT: Homodimer; disulfide-linked. Also found as with PIGF (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                European Bioinformatics Institute.

Biol. 169:699-712(1995).

-!- FUNCTION: Growth factor active in angiogenesis, vasculogenesis and endothelial cell growth. It induces endothelial cell proliferation, promotes cell migration, inhibits apoptosis, and induces permeabilization of blood vessels. It binds to the VEGFR1/Flt-1 and VEGFR2/Kdr receptors and to heparan sulfate and heparin (By similarity).

-!- SUBUNIT: Homodimer; disulfide-linked. Also found as heterodimer

Am. J. Hum. Genet. 41:605-615(1987).

In FUNCTION: Binding to cells via a high affinity receptor, laminin is thought to mediate the attachment, migration, and organization of cells into tissues during embryonic development by interacting with other extracellular matrix components.

SUBUNIT: Laminin is a complex glycoprotein, consisting of three different polypeptide chains (alpha, beta, gamma), which are bound to each other by disulfide bonds into a cross-shaped molecule comprising one long and three short arms with globules at each
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Jaye M.,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sorokin L.M.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Frieser M.,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               THE BETA-1 CHAIN IS A SUBUNIT OF LAMININ-1 (EHS LAMI 2 (MEROSIN), AND LAMININ-6 (K-LAMININ).
SUBCELLULAR LOCATION: EXTRACEDILLIAR:
TISSUE SPECIFICITY: FOUND IN THE BASEMENT MEMBRANES COMPONENT).
SUMILARITY: Contains 1 laminin N-terminal domain.
SIMILARITY: Contains 1 laminin EGF-like domains.
SIMILARITY: Contains 1 laminin IV domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             FUNCTION: Binding to cells via a high affinity receptor, laming thought to mediate the attachment, migration, and organizate of cells into tissues during embryonic development by interact with other extracellular matrix components. Consisting of this SUBUNIT: Laminin is a complex glycoprotein, consisting of this different polypeptide chains (alpha, beta, gamma), which are it ceach other by disulfide bonds into a cross-shaped molecule Comprising one long and three short arms with globules at each and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       THE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              3:2355-2362(1984).

21 A

Immunogenic peptide fragment derived from FGF and/or VEGF.

15-JAN-2001 (first entry)

AAB18546;

Immunogenic peptide; fibroblast growth factor; FGF; VEGF; cancer; vascular endothelial growth factor; hyperproliferative disorder; haemangioma; solid tumour; blood borne tumour; leukaemia; metastasis; telangiectasia; psoriasis; scleroderma; pyogenic granuloma; myocardial angiogenesis; Crohn's disease; plaque neovascularisation; arteriovenous malformation; corneal disease; rubeosis; neovascular glaucoma; diabetic retinopathy; retrolental fibroplasia; arthritis; diabetic neovascularisation; macular degeneration; wound healing; peptic ulcer; Helicobacter related disease; fracture; keloid; vasculogenesis; hematopoiesis; ovulation; menstruation; placentation; cat scratch fever.

WO200053219-A2. Unidentified.

10-MAR-2000; 2000WO-US06320.

14-SEP-2000.

11-MAR-1999; 99US-0266543
